## ROLAND UNVEILS TM-6 PRO TRIGGER MODULE

*Powerful, Easy-To-Use Sound Module Brings Professional Hybrid Versatility to Any Acoustic Drum Set*

**The NAMM Show, Anaheim, CA, January 24, 2018** — Roland (ACC North, Level 2, Exhibit 17420) introduces the TM-6 PRO Trigger Module, a compact and powerful device for professional hybrid drumming. The TM-6 PRO features 500 sampled sounds—including many newly recorded at world-famous studios—plus 268 expressive V-Drums sounds, 80 ready-to-use kits, and inputs for connecting up to 12 pads and/or drum triggers. Adding in user sample import, four assignable audio outputs, a click track, headphones monitoring, and more, the TM-6 PRO is the ultimate command center for bringing hybrid power and versatility to any acoustic drumming setup.

Today's popular music commonly incorporates electronic percussion sounds created in the studio, and acoustic drums are often enhanced in the mix with layered samples for bigger impact and fatter tone. The [TM-6 PRO](#) makes it simple for any drummer to bring these electronic sounds and samples to their stage performances and control everything right from their kit.

From the TM-6 PRO's panel, players can easily assign, mix, and modify sounds, apply built-in effects, monitor trigger status, and more. It's also possible to play backing tracks directly from SD media and use the TM-6 PRO as a USB audio interface and trigger-to-MIDI converter for a computer DAW.

The TM-6 PRO features six dual-trigger inputs that can accommodate up to 12 total trigger devices when using Y cables. Available Roland devices include V-Pads, RT-series acoustic drum triggers, the BT-1 Bar Trigger Pad, and more. There's also a hi-hat control input for connecting an FD-8 hi-hat pedal.

To learn more about the TM-6 PRO Trigger Module, visit [Roland.com](http://Roland.com).
