FOR IMMEDIATE RELEASE

Roland Pro A/V Announces New Products to Enhance the Quality of Livestream Productions During CES 2022 Digital

AeroCaster, UVC-02 Web Presentation Dock, and CGM-30 Gooseneck Microphone Provide Simple Solutions to Bring Higher Production Values to Livestreaming Applications

Los Angeles, CA, January 4, 2022 — [Roland](https://www.roland.com), a leading manufacturer of professional audio, video, and electronic musical instrument gear, announces three new products to help livestreamers take their productions to the next level.

AeroCaster

[AeroCaster](#) is an innovative, easy-to-use system that allows anyone to create a wireless multi-camera streaming setup using mobile devices. The system consists of the AeroCaster VRC-01 hardware control surface and audio interface, the AeroCaster LIVE app for iPad, and the AeroCaster Camera app for iOS and Android mobile devices. Leveraging the convenience and mobility of wireless connectivity, AeroCaster opens up a new world of creative possibilities for any livestreaming application, from online talk shows and music performances to live commerce, remote education, and beyond.

AeroCaster lets users switch wireless camera feeds from smartphones and tablets, plus screen shares from computers and mobile devices. The system supports up to four wireless devices at once, along with the camera on the host iPad. Roland's advanced video technology is also available for adding graphics, titles, video clips, photos, and more. Operation is quick and intuitive, with a direct streaming connection to YouTube, Facebook Live, Twitch, and custom RTMP channels over Wi-Fi or 4G/5G cellular networks.

UVC-02 Web Presentation Dock

Using web conferencing platforms to conduct business has become a regular part of life; but, the quality of most built-in computer webcams and microphones leaves a lot to be desired. The [UVC-02 Web Presentation Dock](#) helps users bridge that gap, providing a simple and affordable solution to level up virtual presentations with better quality audio/visual gear and more control.

The compact UVC-02 is a desktop control hub that allows the user to connect a high-quality HDMI camera, pro microphone, and other audio sources and send them directly to computer-based meeting and streaming platforms via a single USB cable. It also includes a panel full of hands-on knobs and switches, providing quick hardware control of levels, audio and video muting, sound effects, and more.

CGM-30 Gooseneck Microphone

The [CGM-30 Gooseneck Microphone](#) plugs directly into the XLR input on the UVC-02 Web Presentation Dock, providing a high-quality desktop solution that eliminates the need for an external mic and stand. It also works with the Roland VR-1HD AV Streaming Mixer and any other product with a phantom-powered XLR microphone input on the top panel.

Availability & Pricing

The Roland AeroCaster VRC-01, UVC-02 Web Presentation Dock, and CGM-30 Gooseneck Microphone will be available in the U.S. in March at select authorized Roland dealers and Amazon.com for the following prices:

- **AeroCaster VRC-01:** \$295.00
- **UVC-02 Web Presentation Dock:** \$295.00
